

# REPORT/MATE™ ENGINE

Generate and customize reports  
on data that's important to you

Quick assessments of your dealership give you the power to make better decisions more easily.

## Product Description

Report/Mate™ gives your dealership the ability to create detailed reports and track items such as sales, inventories, negative parts on hand, G/Ls, trends, profit and expenses. Measure performance, set achievable goals and increase efficiency and reliability by generating customizable reports that you can schedule to run automatically. These advanced report generators bring the ease of Excel® to DMS reporting.

## How Report/Mate™ can help your dealership

- Drill-down detail on individual field values
- Schedule regular reports and share across departments
- Measure KPIs and set better goals
- Pulling live data from a single database results in more accurate and reliable data

## Sales Suite Reporting:

Assess your sales department's performance with sales reporting in Report/Mate™. View reports such as basic inventory, detailed commission reports or gross. By generating these sales reports, you'll be able to figure out where your team is succeeding or where they need to improve. Get the most out of your salespeople by analyzing your data with more accuracy.

## Accounting Suite Reporting:

Accounting reports can be customized and generated around the criteria that's important to your dealership. View your floor plan or transaction audit log reports, as well as any other custom transaction report in one convenient location. Sensitive fields like SSN have extra security so only designated employees can see them. DOC pages can be shared individually so department managers only see the necessary information. Because the data is pulled from one source in real time, our accounting reporting is more accurate and reliable than ever.

## Fixed Ops Suite Reporting:

The addition of the parts and service modules to Report/Mate™ brings all of your DMS reporting into one location of AMPS. Fixed Ops Report/Mate™ features reports such as current on hand parts quantities, service work in progress, over-the-counter parts sales as well as the ability to create your own fixed ops reports based on other criteria you wish to measure and monitor.
